

MATIAS SKØDT

CV:

Kitchen Assistant at Testrup Højskole
2015-2017

Chef at Testrup Højskole
2017-2019

Chef at Café Landmad
March – August 2017

Dj
Behind the decks since 2016

Studying Multimedia Design at Erhvervsakademi Aarhus
2018 – Currently

Large portion of my grown-up years have been spent in a kitchen. I started working as a dishwasher back in 2015 when I lived in Berlin. The hectic and exciting kitchen workspace fascinated me and caused me to search for an opportunity to work fulltime with cuisine. I found my way to Testrup Højskole and ended up staying there for the last 4 years, working fulltime as a chef, preparing food daily for the 120 students and teachers, but also as an extra kitchen help in busy times when the school was housing events or longer courses.

After traveling in South East Asia for half a year, I decided I was ready for new challenges. I found this new challenge in aiding as one of the founding members of a new café in Aarhus called Landmad. After the café began running successfully, I decided to revisit my passion for cooking at a larger level and returned to Testrup Højskole.

It wasn't only a passion for cuisine I picked up in Berlin. I also found a profound love for electronic music and the Berlin club scene. After a year or so, I bought my first DJ-controller and started mixing. Today I mix at all kinds of occasions from weddings to underground raves. I spend way too much money on vinyls and digging up weird music from the past.

As a newer interest, I also found a passion for coding. At my 3rd semester on the Multimedia Design education, the coding classes was where I felt truly at home. I have a curious and playful approach to learning and using code. I enjoy the fulfilment of making interactive products through the often rough and bumpy process of troubleshooting and bug fixing. For now, I have worked with HTML, CSS and JavaScript, where I found most interest in JavaScript. We worked primarily with the integration of fetch in webapp-products and setting them up as singlepages with JavaScript.

I am eager to learn more about all types of technology, specifically working with Node.js and other .js-based libraries.

I am a super social guy living in a smaller commune with 3 others. I value spending a lot of time with friends through our weekly card game club, dinner clubs and going out during the weekends.
